1. What is this about?

With **VoteVox** you cast your vote in a school election (e.g. the school representative election) **digitally with your phone**.

For this you receive a **printed card with a QR code**. This code is your **personal, one-time voting key**:

- It allows **exactly one** vote.
- It is **anonymous** – your name is **not** stored. Nobody can tell whom you voted for.
- After voting the code is **used up** and no longer works.

Treat the card like a ballot paper: do not pass it on, do not let anyone photograph it.

Part A – How you vote in the test program

A1. What you need

- Your **phone** with a camera.
- You are on the **same WiFi** as the voting PC (announced on site).
- Your **QR code card**.

A2. Scan the QR code

1. Open the **camera app** (or a QR scanner) and point it at the QR code.
2. Tap the link that appears. The **"VoteVox"** voting page opens.

Alternative without a camera: On the start page of the voting app there is, below "or", an option to **enter the code by hand** ("Paste or type your code"). You find the code on your card.

A3. If a security warning appears

In the test setup the browser may show a message like **"Your connection is not secure"**. This is harmless inside the internal school network.

- Tap **"Advanced"** and then **"Proceed / Continue to the site"**.
- *(If the school has installed a certificate on the devices beforehand, this warning does not appear at all.)*

A4. Choose a candidate

1. At the top you see the **title of the election**.
2. Below it the list of **candidates** (with name, class and department).
3. Tap the person you want to vote for – they become **highlighted**.
4. Tap **"Continue"**.

You can select only **one** person.

A5. Confirm your choice

1. On the confirmation page (**"Confirm your vote"**) you see once more **whom** you selected.
2. If everything is correct: tap **Confirm**. If you want to change something: tap **Back** and choose again.

 **Caution:** After confirming, your vote is **final** and **cannot** be changed.

A6. Done

The confirmation “**Your vote has been recorded**” appears. You can now close the page. **Thank you for taking part!**

A7. If something does not work

Message / problem	Meaning & what to do
Page does not open	Are you on the correct WiFi ? Accept the security warning as in A3. If needed, enter the code by hand (A2).
“Missing voting code”	The link was incomplete. Scan the QR code again or enter the code by hand.
“Code already used” / rejected	This code has already been used to vote . Each code is valid only once .
Election is not active	The election has not started yet or has already ended. Tell the supervisor.
Camera does not open	Allow the QR scanner/camera app, or enter the code by hand.

If problems persist, contact the **election supervisor** on site.

Part B – How it will be in the production version

In a later, real deployment at the school, voting will be **even simpler** for you. The following is planned:

- **Vote from anywhere:** You will **no longer** need to be on the school WiFi. The voting page is reachable via a fixed internet address (e.g. `vote.htl-wels.at`) – even on mobile data.
- **No more security warning:** Thanks to an official certificate the page opens immediately and without any warning. The step from **A3 is gone completely**.
- **The camera works immediately** on all devices, without installing anything first.
- **Same simple flow:** scan → choose a candidate → confirm → done. Nothing about this changes.
- **Still fully anonymous:** the production version also does **not** store who voted how. Your QR code stays your one-time, anonymous key.

Your vote counts – and stays secret.
